

EmobacTM Cream

Benzalkonium Chloride 0.1%, Chlorhexidine Hydrochloride 0.1%,
Liquid Paraffin 10%, Isopropyl Myristate 10%

Composition

EmobacTM Cream: Each gram cream contains Benzalkonium Chloride USP 1 mg, Chlorhexidine Hydrochloride BP 1 mg, Liquid Paraffin BP 100 mg and Isopropyl Myristate BP 100 mg.

Description

EmobacTM Cream is a multiple combination cream which exhibits antimicrobial and properties to control dry skin problem. Benzalkonium Chloride and Chlorhexidine Hydrochloride are antimicrobials. They help to combat bacteria present on the skin that can make eczema worse and prevent the infection caused by scratching itchy skin. Liquid Paraffin and Isopropyl Myristate are emollients that helps to soften, moisturize and protect the skin by trapping moisture in the skin and restoring the normal protective function of the skin.

Indications

EmobacTM Cream is indicated in the treatment and prevention of dry and itchy (pruritic) skin conditions, especially eczema and dermatitis.

Dosage and Administration

Apply the cream to the affected areas and rub gently into the skin. Ideally, EmobacTM Cream should be applied three or four times a day. All age groups can use EmobacTM Cream, including babies.

Contraindications

contraindicated in patients hypersensitive to any of the ingredients.

Side Effects

In some very rare cases, it can cause local skin reactions (involving redness, irritation and/or itching). Use of this cream should be discontinued if the skin condition seems to look or feel worse.

Precautions

Do not swallow. For external use only.

Use in Pregnancy and lactation

There are no restrictions on the use during pregnancy or lactation.

Drug interactions

This product is not known to affect, or to be affected by, other medicines.

Storage

Do not store above 30 °C. Keep away from light and out of the reach of children.
